

Compost/Sand Blend

Texas Pure Products Compost/Sand Blend is a ready-to-use planting mix comprised of compost and sand. This product provides nutrients, increases water-holding capacity for direct planting, levels grades and fills hollows in parkway areas. No additional blending is required and ingredients may be adjusted as needed to meet specific requirements.

Specifications

Compost/Sand Blend is comprised of two elements, which may be adjusted to meet specific requirements:

- **Compost - Organic and OMRI Listed:**
Comprised entirely of herbaceous materials, containing no manures. Feedstock includes whole-tree grind (leaves, bark, branches, cambium layer); and yard trimmings include shrubs, palm fronds, leaves and grass. Ground feedstock is combined with organics (fruit, vegetables and breads) from groceries and markets. Windrow management finishes compost to meet the United States Composting Council (USCC) STA testing requirements (weed and pathogen free), rich in organic matter and nutrients required by all plants for successful growth. Monthly sprout test ensures the compost is mature and capable of sustaining vigorous life.
- **Sand:** Washed river sand screened to ¼-inch fine provides drainage and mix stability.

Weight: Approximately 50 pounds per cubic foot

Application and Installation

- Direct plant into this nutrient rich blend.
- Use it to level areas with uneven subgrade as needed.
